

## **Army Stationing and Installation Plan (ASIP)**

The Army Stationing and Installation Plan (ASIP) is the official Department of the Army database that reflects the authorized planning population for Army Installations. ASIP data is used by HQDA as a basis for all planning and resource development systems and is used to indicate ownership or occupation of facilities in the Integrated Facilities System, develop population based service requirements in the Installation Status Report and Service Based Costing (ISR/SBC), develop facilities allowances in the Real Property Planning and Analysis System (RPLANS), and to describe installation population in the DD1390 Military Construction (MILCON) request system. Accuracy of the ASIP data is important because it feeds into the processes and the decision-making tools we are using to make important decisions. In light of the current pace of change due to modularity and other initiatives it is vital that the ASIP receive a comprehensive review in 2005.
